

# "Soft Air" ventilation ceiling with "Ventu-flow" system

- When the "Ventu-flow" ventilation system is used in combination with a "Soft-Air" ventilation ceiling , it produces the following added benefits:
- The natural air flow in the house is improved, enabling less ventilation in winter and better use of fresh air in summer.
- The system prevents undesirable air movements from one half of the room to the other.
- Pig farmers have a more pleasant climate to work in when checking the animals.
- Possible temperature differences in a room are reduced.
