GENUGTEN AGRI BV

Saloon box

Multifunctional use:

- Universally applicable in the waiting and service area.
- Gates which can be locked in closed and open position for use in group housing.
- Easy access to the sows during insemination and scanning.

The front-positioned strips are very effective during oestrus checks. The gestationcrate in this picture is equipped with a stainless steel trough with bars.

In the box, a special notch is made to mount the nipple drinker. The saloon box is available in two sizes: 2.00 m and 2.10 m.

If this is applied in group housing, the gates can also be locked in position if they are open.
